

Final Project Submission and Evaluation Guidelines

Presentation and Demonstration Videos (Mandatory)

*As part of the final evaluation of the **ISEA Phase III Networking Internship**, every student is required to submit **two separate videos** demonstrating both their understanding of the project and the successful execution of their application.*

The objective of these videos is to evaluate the student's technical understanding, communication skills, software implementation, and the overall functionality of the developed networking application.

Video 1: Project Presentation

Duration: 5–7 Minutes

Students shall prepare a professional presentation using **Microsoft PowerPoint (or an equivalent presentation software)** and present their project as if they are demonstrating it to a client, project manager, or technical review committee.

Presentation Structure

The presentation should include the following sections.

1. Introduction
 - Student Name
 - Roll Number
 - Project Title
2. Problem Statement
3. Project Objectives
4. System Architecture
5. Features Implemented
6. Security Features
7. Scalability and Reliability Improvements

8. Experimental Results

- Performance graphs
- Wireshark verification
- Important observations

9. Challenges Faced

10. Future Improvements

11. Conclusion

Important Guidelines

- The presentation should focus on explaining the **design and implementation** of the project.
 - Large code snippets should **not** be included.
 - Students should clearly explain the purpose of every major module of the application.
 - The presentation should be clear, concise, and professional.
-

Video 2: Software Demonstration

Duration: 5–7 Minutes

Students must record a live demonstration of their application.

The demonstration should clearly show that the submitted application is fully functional.

Demonstration Checklist

The following checklist should be completed during the demonstration.

Feature	Status
Server starts successfully	☐
Client(s) connect successfully	☐
User login/authentication	☐
Broadcast messaging	☐

- | | |
|--------------------------------------|--------------------------|
| Private messaging | ☐ |
| Online user management | ☐ |
| GUI functionality | ☐ |
| Security features | ☐ |
| Scalability/Reliability improvements | ☐ |
| Graceful client disconnection | ☐ |

Students should explain each demonstrated feature while performing the demonstration.

GitHub Repository Verification

At the beginning of **both videos**, students must display their GitHub repository.

The following information should be shown:

- Repository Name
- Repository URL
- README.md
- Latest Commit History

The repository name should continue to follow the naming convention:

ISEA-Phase3-TezpurUniversity-<ProjectName>

Video Recording Guidelines

- Record the videos using a clear screen recording.
- Voice explanation is **mandatory**.
- Students are **not required to appear on camera**.
- The demonstration should use the student's own implementation.
- The submitted videos should correspond to the submitted source code.
- Videos should preferably be recorded in **one continuous session**. Excessive editing or unnecessary cuts should be avoided.

- Ensure that the screen resolution is sufficient for code, terminal output, and GUI elements to be clearly visible.
-

File Naming Convention

Name the files as follows:

- ROLLNO_NAME_PRESENTATION.mp4
 - ROLLNO_NAME_DEMONSTRATION.mp4
-

Submission

Students must submit the following items for the final evaluation:

- Source Code (Final Assignment)
 - Project Report (PDF)
 - GitHub Repository Link
 - Presentation (PPT/PDF)
 - Presentation Video (MP4)
 - Software Demonstration Video (MP4)
 - Screenshots
 - Graphs and CSV Files (where applicable)
-

Evaluation Rubric

A. Project Presentation Video (10 Marks)

Component	Marks
Problem Statement and Objectives	2
System Architecture	2
Feature Explanation	2
Experimental Results	2

Presentation Quality and Technical Understanding	2
Total	10

B. Software Demonstration Video (10 Marks)

Component	Marks
Application Execution	2
Functional Demonstration	3
Security and Reliability Features	2
GitHub Repository Verification	1
Technical Explanation During Demonstration	2
Total	10

Important Notes

1. Submission of **both videos is mandatory**.
2. Videos without voice explanation will receive reduced marks.
3. The videos should accurately represent the submitted source code.
4. Students should be prepared to answer questions related to their implementation during the viva or project evaluation.
5. Failure to demonstrate the implemented features may result in deduction of marks, even if the source code has been submitted.
6. The evaluation committee may request students to perform additional live demonstrations if required.
